.ENV LINE-BY-LINE EXPLANATION

.env stores local runtime settings. Secret values are intentionally redacted in this explanation PDF.

FLASK SETTINGS

Line 1: comment marking the Flask configuration section.

Line 2: SECRET_KEY configures Flask session signing. The actual value is redacted.

MYSQL SETTINGS

Line 4: comment marking the local MySQL Workbench connection section.

Line 5: MYSQL_HOST defines the database host. Value redacted.

Line 6: MYSQL_PORT defines the database port. Value redacted.

Line 7: MYSQL_USER defines the database username. Value redacted.

Line 8: MYSQL_PASSWORD defines the database password. Value redacted.

Line 9: MYSQL_DATABASE defines the database/schema name. Value redacted.

AUTH SETTINGS

Line 11: comment marking the authentication configuration section.

Line 12: OTP_DEMO_MODE controls whether the app shows demo OTPs instead of sending SMS.

Line 13: OTP_TTL_SECONDS controls how long a generated OTP remains valid.

Line 14: GOOGLE_CLIENT_ID identifies the Google OAuth client. Value redacted.

Line 15: GOOGLE_CLIENT_SECRET authenticates the Google OAuth client. Value redacted.

Line 16: GOOGLE_REDIRECT_URI tells Google where to send users after OAuth approval. Value redacted.

SECURITY NOTE

This file is correctly ignored by .gitignore. Do not commit it, and rotate credentials if they have been shared outside your local environment.
