.GITIGNORE LINE-BY-LINE EXPLANATION

.gitignore tells Git which local, generated, secret, or cache files should not be committed.

PYTHON OUTPUTS

Line 1: ignores __pycache__ directories created by Python.

Line 2: ignores compiled Python bytecode files such as .pyc and .pyo.

Line 3: ignores Python class artifacts ending with $py.class.

LOCAL ENVIRONMENTS AND SECRETS

Line 5: ignores the .venv virtual environment folder.

Line 6: ignores a venv virtual environment folder.

Line 8: ignores .env so local secrets/config are not committed.

Line 9: ignores .flaskenv local Flask environment config.

Line 10: ignores instance/, including local user JSON data.

TOOL CACHES AND LOGS

Line 12: ignores pytest cache files.

Line 13: ignores mypy type-checking cache files.

Line 14: ignores Ruff linting cache files.

Line 15: ignores coverage data.

Line 16: ignores generated HTML coverage reports.

Line 18: ignores generic .log files.

Line 19: ignores server log files matching server.*.log.
