README.MD LINE-BY-LINE EXPLANATION

README.md documents what the project is, how to run it, what files matter, how auth works, and which API routes exist.

PROJECT INTRO

Line 1: project title, RoomRent.

Line 3: describes the app as a small Flask rental listing app with protected pages and JSON API driven listings.

RUN INSTRUCTIONS

Line 5: starts the Run section.

Line 7: tells the user to run commands from the project folder.

Lines 9-12: PowerShell snippet to activate the virtual environment and run python app.py.

Line 14: tells the user to open http://127.0.0.1:5000.

Line 16: notes that VS Code can run the configured Flask task.

FILE MAP

Line 18: starts the Files section.

Lines 20-27: briefly explains app.py, auth_store.py, db.py, templates, CSS, JavaScript, and .env.

AUTH NOTES

Line 28: starts the Auth section.

Line 30: explains local phone OTP demo mode and notes that production needs an SMS provider before disabling demo mode.

Lines 32-38: list Google OAuth environment variables needed for Google sign-in.

Lines 40-44: show the redirect URI that must be configured in Google Cloud.

Line 46: warns that localhost and 127.0.0.1 are different redirect URI hosts for Google OAuth.

Line 48: notes that local user records are stored in instance/users.json and ignored by Git.

API NOTES

Line 50: starts the API section.

Line 52: documents GET /api/storage.

Line 53: documents GET /api/listings and its optional filters.

Line 54: documents GET /api/listings/<id>.
