TEMPLATES/BASE.HTML LINE-BY-LINE EXPLANATION

base.html is the shared Jinja layout used by all pages. It defines the HTML shell, header, profile menu, navigation, flash messages, footer, and JavaScript include.

DOCUMENT HEAD

Lines 1-2: start the HTML document and set language to English.

Lines 3-8: define charset, responsive viewport, overridable title block, and CSS link.

HEADER AND PROFILE

Lines 9-10: open the body and sticky site header.

Lines 11-31: if current_user exists, render the profile avatar button with image or initials.

Lines 33-52: render the hidden profile popover header with avatar, name, and auth label.

Lines 54-71: show phone, email, and verified/pending status in a definition list.

Lines 73-75: add a sign-out link and close the profile menu.

BRAND, NAVIGATION, AND STATUS

Lines 78-81: render the RoomRent brand link.

Lines 82-91: show Listings/Contact/Logout links for signed-in users, or Login/Sign up for guests.

Lines 92-96: render the data source pill, which JavaScript updates from /api/storage.

Line 97: closes the header.

FLASH MESSAGES AND CONTENT

Lines 99-107: read Flask flashed messages and render them in an accessible flash stack.

Lines 109-111: open main and insert each page’s content block.

FOOTER AND SCRIPT

Lines 113-122: render contact footer content.

Line 123: load static/js/app.js with defer.

Lines 124-125: close the body and HTML document.
