TEMPLATES/INDEX.HTML LINE-BY-LINE EXPLANATION

index.html is the protected home/search page. It renders the search controls and empty containers that app.js fills with listing data from the API.

TEMPLATE SETUP

Line 1: extends base.html so it inherits the shared layout.

Line 3: sets the page title block.

Line 5: starts the content block.

HERO AND SEARCH

Lines 6-12: render the hero section text.

Lines 14-18: open the GET search form and location input, preserving filters.city.

Lines 19-27: property type select with Apartment, Studio, Villa, and Shared Room options.

Lines 28-36: furnishing select with Fully furnished, Semi furnished, and Unfurnished options.

Lines 37-44: min and max rent number fields with preserved filter values.

Lines 45-53: bedroom select with 1+ through 4+ options.

Lines 54-57: submit button and hero closing tags.

STATS AND LISTING SHELL

Lines 59-72: render a stats strip; JavaScript updates the matching homes count.

Lines 74-82: open the listing section and add a Clear filters link.

Lines 84-87: provide an initial loading/empty state for listings.

Lines 89-95: create the hidden listing grid with API and detail URL data attributes used by app.js.

Lines 96-98: close the listing shell and content block.
