TEMPLATES/PROPERTY.HTML LINE-BY-LINE EXPLANATION

property.html is the protected property detail page shell. JavaScript fetches the listing JSON and fills the data-* placeholders.

TEMPLATE SETUP AND HERO

Line 1: extends base.html.

Line 3: sets the title before JavaScript replaces it with the property name.

Line 5: starts the content block.

Lines 6-10: open the detail hero and store the listing detail API URL in data-api-url.

Lines 11-17: define placeholders for image, type/city, title, address, and price.

Line 18: closes the hero.

DETAILS PANEL

Lines 20-21: open the hidden detail layout and property panel.

Lines 22-28: render the section heading and hidden Featured tag.

Lines 30-55: define rent, deposit, bedrooms, bathrooms, area, and furnishing placeholders.

Lines 57-61: define description and amenity placeholders.

Line 62: closes the property panel.

INQUIRY PANEL

Lines 64-67: open the owner contact panel and inquiry form.

Line 68: include listing_id as a hidden input, also updated by JavaScript.

Lines 69-80: prefill name, email, and phone from current_user.

Lines 81-85: provide a default inquiry message and submit button.

Lines 86-88: close the form, panel, and detail layout.

NOT FOUND STATE

Lines 90-94: hidden fallback shown by JavaScript when the listing API returns an error or

404.

Line 95: ends the content block.
